Yogesh Chaudhary

Columbus, OH | +1 (283) 219-8311
chaudharyyogesh84@gmail.com | linkedin.com/in/yogeshchaudhary101| github.com/chaudharyyogesh

Full-stack software engineer with 4+ years of experience designing and building scalable, cloud-native applications and AI-driven platforms using React, ASP.NET, Spring Boot, and LLMs on Azure and AWS. Experienced in performance optimization, secure system design, and production-grade CI/CD pipelines.

Skills and Knowledge

Languages: Java, JavaScript, Python, C#, SQL
Frameworks: React, Next.js, Node.js, Spring / Spring Boot, ASP.NET, Laravel
AI/ML: LangChain, RAG, HuggingFace, TensorFlow, PyTorch, LLMs, Fine-tuning, Evaluation
APIs: RESTful API Design, GraphQL, OAuth2, JWT
Databases: PostgreSQL, MySQL, DynamoDB, MongoDB, Redis
Cloud & DevOps: AWS (EC2, ECS, RDS, Lambda, CloudWatch), Azure (AI, VMs, SQL, Blob), Docker, Terraform, Kubernetes, Jenkins
Tools: Git, Jira, Postman, Swagger, SonarQube

Professional Experiences

Software Engineer Intern (Full Stack) *(C#, ASP.NET, React18, Azure, MySQL, SQL Server)* 05/25 - Current
SureImpact, Powell, OH

- Designing and implementing an intelligent **Azure AI RAG** based data ingestion pipeline, reducing manual data preparation from hours to minutes while improving processing scalability.
- Streamlined bug triage and resolution workflows by improving **logging** and **prioritization**, eliminating more than 50% of backlog tickets within two months.
- Optimized complex **analytical queries** by eliminating extraneous data fetching, achieving sub-second execution time.
- Reduced redundant API calls across React component hierarchies, lowering total API requests by 30%.
- Actively participating in **code reviews** and collaborating with cross-functional stakeholders, contributing to key **technical decisions** and ensuring alignment with business objectives.

Full Stack Software Developer - Graduate Assistant *(Laravel MVC, Bootstrap5, MariaDB, Docker)* 08/24 - Current
Myaamia Center, Oxford, OH

- Developing an **LLM**-powered machine translation system leveraging **encoder–decoder** architectures and multilingual transfer learning to support indigenous language revitalization.
- Conducting applied research and prototyping a **quantized** mobile NMT model to enable efficient **on-device** inference under resource constrained environments.
- Redesigning **UI/UX** workflows, reducing user interactions by 50% and improving application responsiveness through optimized database queries and APIs.
- Migrated from UUIDs to integer primary keys, significantly improving **query performance** and reducing database overhead.
- Containerized the application using **Docker** and implemented two-factor **authentication** and CAPTCHA-based protection to enhance **security** and deployment consistency.

Senior Member Technical - Full Stack Java *(React.js, Java, Spring, RESTAPIs, AWS, DynamoDB, PostgreSQL)* 09/21 - 07/24
Broadridge Financial Solutions (FinTech)

- Engineered an **LLM-based chatbot** platform using **React.js**, **AWS Bedrock**, and **Spring Boot** to support internal teams and enterprise-facing evaluations of AI use cases and performance.
- Implemented **wrapper APIs** to unify interactions with OpenAI and multiple LLMs on AWS Bedrock, ensuring consistent request/response structures and streamlined integration.
- Configured **microservices** with Spring Boot and enforced secure access using Spring Security, implementing OAuth2 and JWT with custom claims for **authentication** and **authorization**.

- Architected serverless data pipelines using **DynamoDB** and **Lambda** (Python) to automate event-driven **analytics** workflows on **AWS RDS**.
- Conducted comprehensive **unit and integration testing,** deploying Postman for **API testing**, and **Jest** (UI), **JUnit 5**, and **Mockito** for **unit tests**, maintaining over **95% test code coverage** across all codebases.
- Designed optimized keys and indexes to enhance **database query** efficiency, reducing query time by 40%.
- Implemented caching mechanisms to store frequently accessed data and decrease the need for repeated **API** calls.
- Enforced high **code quality** and **security** standards using SonarQube, CAST, and Checkmarx, achieving zero critical **vulnerabilities**, less than 3% **bug** rates, and 2% **code duplication**.
- Collaborated effectively with **cross-functional teams** using **Agile methodologies**, leveraging **Jenkins** for CI/CD and **Jira** for project management and **sprint** tracking.

Software Developer Trainee *(HTML, CSS, JavaScript, React.js, Redux, RESTAPIs, MongoDB)* 06/21 – 08/21
Flower Aura (e-commerce)

- Delivered 10+ production-grade **UI features** using React.js and **Redux** for a high-traffic e-commerce platform.
- Enhanced frontend performance by implementing **memoization** and **lazy loading**, reducing unnecessary re-renders and achieving First Contentful Paint in less than 1 second.
- Re-engineered the checkout workflow, achieving a 40% reduction in average checkout time.

Projects

FinQAI, A Financial Advisor (*Python, LangChain, HuggingFace, ChromaDB*) 03/24 – 04/24

- Architected and fine-tuned a financial question-answering system using a **multi-stage RAG** pipeline grounded in verified financial documents.
- Leveraged **LangChain** to orchestrate document loading, chunking, embedding workflows, and end-to-end RAG pipeline execution.
- **Evaluated** system performance using **RAGAS**, achieving a faithfulness score of 0.8.

Merge Request Summarizer, Gen-AI Hackathon *(Python, OpenAI, Git, GitLab pipeline)* 03/24 – 04/24

- Utilized Python, GitLab pipelines and OpenAI API, **automating** real-time summaries and code quality recommendations.
- Boosted code review efficiency by 30% and cut down manual review time by 40%.
- Customized OpenAI **prompts** aligned with project standards, improving **human-evaluated response** relevance by 35%.

Education

Master of Science in Computer Science *(Research Track)* | **4 GPA** 08/24 – 05/26 *(Expected)*
Courses: Generative AI, Advanced Algorithms, Advanced Database Systems, Cryptography.
Miami University, Oxford, OH

Bachelor of Technology in Computer Science and Engineering 08/17 – 06/21
Fully funded undergraduate scholarship.
Dr. B.R. Ambedkar National Institute of Technology (NIT Jalandhar)

Key Achievements

- Lead author of a **research paper** accepted by **IEEE** SysCon 2026 focusing on low-resource on-device **neural machine translation** and **model quantization**.
- **Winner**, Broadridge Hackathon Challenge 2023 – Most Innovative Solution
- 1st Runner-Up, Broadridge **Gen-AI** Hackathon 2024 – Ranked among 20+ professional teams
- **Best Technology Team Award**, Broadridge 2024 – Recognized for engineering excellence
- Graduate Assistant, Myaamia Center – Supporting indigenous language revitalization through **AI research**
- Recipient, COMPEX Full-Ride Scholarship – Top 3% of 10,000+ applicants
